2100 Forage Box

Introducing our brand new forage box line. Find great value with some Art's Way only benefits. Our new line-up features box lengths in 16, 18, and 20 foot lengths. You can order them with or without a roof. Front, Rear, or a combination of Front and Rear unload options are all available.

User Comfort

New in-cab controls are easy to use on our hydraulic units. Use a control box to change from front to rear unload, engage your front discharge extension, cross conveyor chain, beaters, and main floor chain. Items are sequenced for machine safety for any operator. We are the only forage box on the market with the ability to change from front to rear unload from your cab!

Simplified Design

We have made significant design improvements to how the box is driven, operated, and maintained. Both Front and Rear unload operations are driven with Berma gearboxes and hydraulic motors. This simple design removes the need for constantly tightening and checking sprockets and chains everywhere. The floor chain is easily tensioned with an allen wrench from the rear of the box. The only drive chain to tension are the front unload beaters.
